

DIGITAL DENTURES:

FREQUENTLY ASKED QUESTIONS

STARTING SEPTEMBER 1ST - ALL FULL IMMEDIATE DENTURES WILL BE FABRICATED USING OUR DIGITAL WORKFLOW!

WHAT CAN I EXPECT WITH THIS CHANGE?

Can I still send traditional impressions?

Yes. You can continue using PVS or alginate impressions. We will digitalize all analog records in-house. Digital scans are welcome too if your clinic is equipped.

What if I need a reline?

No problem - because all designs are archived, we can quickly manufacture a new denture or assist with lab-processed relines using the original digital file. This makes relines more accurate and less labor-intensive for your team. If there isn't a digital file to use, we can still perform a traditional reline.

Will it still look natural for my patients?

Absolutely. Our digital tooth libraries are highly customizable, and you can still request specific shades, molds, and esthetic setups. A printed try-in can be provided when needed.

Will turnaround times change?

Yes - for the better. Digital workflows reduce production steps and shipping delays, allowing faster case delivery. Have an emergency? Ask us about our rush options.

What if something doesn't fit?

We offer digital case planning support, including try-ins and esthetic previews. You will have more control than ever, with fewer surprises on delivery day.
